Lesson 3: Calculations used when compounding medications
lesson. The first one is stock solution. A stock solution is the most concentrated form of a drug that you can put your hands on. Sometimes a stock solution will be pure drug in powder or crystalline form (I know, I know: it’s not a solution then, but people may call it that, anyway). At other times it will be a liquid or a solid paste or cream.

Spike-and-recovery and linearity-of-dilution assessment
were assayed by adding 50 µl of sample and 10 µl of spike stock solution calculated to yield the intended 0, 15, 40 or 80 pg/ml spike concentration. Values reported for spiked samples reflect subtraction of the endogenous (no-spike) value. Recoveries for spiked test samples were calculated by comparison to the measured recovery
